; Patent No. 6608018
; GENERAL INFORMATION:
; APPLICANT: No. 6608018ozymes A/S
; APPLICANT: Shinohara, Mari L.
; TITLE OF INVENTION: Polypeptides having branching enzyme activity and nucleic acids
; TITLE OF INVENTION: same
; FILE REFERENCE: 5860.200-US
; CURRENT APPLICATION NUMBER: US/09/537,120
; CURRENT FILING DATE: 2001-08-17
; NUMBER OF SEQ ID NOS: 2
; SOFTWARE: PatentIn version 3.1
; SEQ ID NO 2
; LENGTH: 621
; TYPE: PRT
; ORGANISM: Rhodothermus obamensis
US-09-537-120-2

Query Match 54.2%; Score 39; DB 2; Length 621;

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX New humanized anti-CD11a antibody, useful for treating or preventing e.g.

XX inflammation and transplant rejection, contains human heavy variable

XX region complementarily determining regions.

XX Claim 4; Col 57-58; 38pp; English.

XX The present invention describes a humanised anti-CD11a antibody (Ab) that

XX binds specifically to the human CD11a I-domain. The Ab has anti-

XX inflammatory, immunosuppressant, antitumour and antiviral activities. The

XX Ab blocks lymphocyte function-associated antigen (LFA-1) which is

XX involved in leucocyte adhesion associated with inflammatory and

XX immunological responses. The Ab are used: (i) optionally when coupled to

XX a cytotoxin, to treat or prevent disorders mediated by lymphocyte

XX function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,

XX inflammatory bowel disease, eczema, systemic lupus erythematosus,

XX rhinitis, leukaemia, viral infections and many others, also for

XX inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for

XX tumor pretreatment; (iv) for delivery of enzymes that convert prodrugs

XX to active anticancer agent; and (v) for affinity chromatography. The Ab

XX retain about the same activity in adhesion and mixed lymphocyte response

XX assays as the murine antibodies from which they are derived. The murine

CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing LFA-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanized version of MHM24 had IC50 0.13 nM. The present
 CC sequence represents the light chain variable region CDR1 of the humanised
 CC anti-CD11a Ab

 PS Claim 8; SEQ ID NO 13; 43pp; English.
 XX
 CC The invention relates to a humanised anti-cluster of differentiation
 CC (CD)11a antibody having specificity to human CD11a I-domain or CD11a with
 CC a kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (nM) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the antibody by culturing the cell so that the
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The

CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is a CDR (complementarity determining region) of the
 CC light chain variable region (VL) of the humanised mouse anti-CD11a I
 CC domain monoclonal antibody MHM24.

 PT New antibody mutant of a species-dependent antibody useful for treating
 PT and preventing infectious diseases, psoriasis, inflammatory bowel
 PT disease, allergic conditions, autoimmune diseases, or cancer.
 XX
 PS Example; SEQ ID NO 53; 54pp; English.
 XX
 CC The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful

for treating and preventing infectious diseases such as human immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin disease such as psoriasis, inflammatory bowel diseases such as Crohn's disease and ulcerative colitis, adult respiratory distress syndrome, allergic diseases such as eczema and asthma, autoimmune diseases such as rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes mellitus, Reynaud's syndrome, immunological diseases such as tuberculosis, sarcoidosis, polyomyelitis and chronic obstructive pulmonary disease (COPD), CNS inflammatory disorder, skin hypersensitivity disorders such as poison ivy and poison oak, B-cell malignancies such as chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host disease and cancer. The invention is also useful in gene therapy. The present sequence is humanised murine anti-human CD11a monoclonal antibody (MHM24) CDR-L1 peptide. This sequence is used in the exemplification of the invention.

PS Disclosure; Page 53; 71pp; English.

XX This sequence represents the light chain of the humanised antibody MEM24,
 CC and was used to produce a mutant of the invention. The mutants are of a
 CC species-dependent antibody (Ab), and have an amino acid substitution in a
 CC variable region of the Ab, and binding affinity for an antigen (Ag) from
 CC a non-human mammal at least 10 times stronger than for the wild type Ab
 CC against the Ag. The mutant antibodies are particularly intended for
 CC administration to a non-human mammal in preclinical studies (e.g. of
 CC infection, immunity, haematopoiesis or transplantation). They can also be
 CC used diagnostically (to identify specific proteins) or therapeutically,
 CC e.g. where directed against CD11a (lymphocyte function-associated antigen
 CC -1) or intercellular adhesion molecule-1 against a wide variety of
 CC inflammatory or autoimmune diseases, malignancies, transplant rejection,
 CC human immune deficiency virus infection and tumour cell invasion.
 CC Conversion to the mutant form allows useful antibodies to be produced
 CC from antibodies which normally have affinity for non-human analogues of
 CC the Ag too low to be of any use

PS Example; Fig 1; 38pp; English.

XX The present invention describes a humanised anti-CD11a antibody (Ab) that
 CC binds specifically to the human CD11a I-domain. The Ab has anti-
 CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
 CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
 CC involved in leucocyte adhesion associated with inflammatory and
 CC immunological responses. The Ab are used: (i) optionally when coupled to
 CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
 CC rhinitis, leukaemia, viral infections and many others, also for
 CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
 CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
 CC to active anticancer agent; and (v) for affinity chromatography. The Ab
 CC retain about the same activity in adhesion and mixed lymphocyte response
 CC assays as the murine antibodies from which they are derived. The murine
 CC anti-CD11a antibody MEM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing LFA-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanized version of MEM24 had IC50 0.13 nM. The present
 CC sequence represents the amino acid sequence of murine MEM24 light chain,
 CC which is used in the exemplification of the present invention

PT	New humanized anti-CD11a antibody, useful for treating or preventing e.g. inflammation and transplant rejection, contains human heavy variable region complementarily determining regions.
PS	Claim 5; Fig 1; 38pp; English.
XX	
CC	The present invention describes a humanised anti-CD11a antibody (Ab) that binds specifically to the human CD11a I-domain. The Ab has anti- inflammatory, immunosuppressant, antitumor and antiviral activities. The Ab blocks lymphocyte function-associated antigen (LFA-1) which is involved in leucocyte adhesion associated with inflammatory and immunological responses. The Ab are used: (i) optionally when coupled to a cytotoxin, to treat or prevent disorders mediated by lymphocyte function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis, inflammatory bowel disease, eczema, systemic lupus erythematosus, rhinitis, leukaemia, viral infections and many others, also for inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs to active anticancer agent; and (v) for affinity chromatography. The Ab retain about the same activity in adhesion and mixed lymphocyte response assays as the murine antibodies from which they are derived. The murine anti-CD11a antibody MRM24 has IC50 0.09 nM for preventing adhesion between Jurkat cells (expressing LFA-1) and normal epidermal keratinocytes that express ICAM-1 (intracellular adhesion molecule-1). The fully humanized version of MRM24 had IC50 0.13 nM. The present sequence represents the light chain variable region of the humanised anti- CD11a Ab

XX PT Purifying a protein, e.g. antibody or immunoadhesin, comprises reducing
XX PT the temperature of a composition subjected to protein A affinity
XX PT chromatography to 3-20 degrees C, where protein A leaching is reduced.
XX PS Disclosure; SEQ ID NO 5; 27pp; English.
XX XX
XX CC The invention relates to a method of purifying a protein which comprises
XX CC a CH2/CH3 region by protein A affinity chromatography. The method
XX CC involves reducing the temperature of a composition comprising the protein
XX CC and one or more impurities subjected to protein A affinity chromatography
XX CC to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably
XX CC the protein is antibody. The antibody is selected from Trautzumab,
XX CC humanized 2C4, humanized CD1a antibody, and humanized VEGF antibody.
XX CC Preferably, the antibody binds HER2 antigen, where the antibody is
XX CC Trautzumab or humanized 2C4. The protein is an immunoadhesin.
XX CC Specifically, a TNP receptor immunoadhesin. The methods are useful for
XX CC purifying a protein, which comprises a CH2/CH3 region by protein A
XX CC affinity chromatography and for reducing leaching of protein A during
XX CC protein A affinity chromatography. The current sequence represents the
XX CC variable light chain amino acid sequence of CD1a.

XX XX
XX PT New conjugates of nonproteaceous polymers with antibody fragments, used
XX PT for treating inflammatory disorders.
XX PS Disclosure; Fig 29; 36pp; English.
XX XX
XX CC The present invention describes a novel conjugate having one or more
XX CC antibody fragments covalently attached to one or more nonproteaceous
XX CC polymer molecules, where the apparent size of the conjugate is at least
XX CC about 500 kDa. Conjugates of antibody fragments which bind the human
XX CC interleukin (IL) 8 with a nonproteaceous polymer can be used for
XX CC treating inflammatory disorders e.g. acute lung injury, ischaemic
XX CC reperfusion disorder, and autoimmune diseases. They can also be used for
XX CC treating e.g. inflammatory skin diseases including psoriasis and atopic
XX CC dermatitis, systemic scleroderma and sclerosis, and asthmatic diseases.
XX CC The conjugates can also be used as reagents in an animal model system for
XX CC in vivo study of the biological functions of the antigen recognised by
XX CC the conjugate. The present sequence represents the human light chain
XX CC kappa-I consensus framework from the present invention

XX XX
XX PT New nucleic acid molecule encodes a polypeptide which is an anti-
XX PT interleukin-8 monoclonal antibody or antibody fragment useful for the
XX PT production of anti-interleukin-8 monoclonal antibodies or fragments.

XX Example; Fig 29; 188bp; English.
PS
XX The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody
CC (Mab). The anti-IL-8 Mab comprises a sequence containing the CDRs
CC (complementarily determining regions) of the humanized anti-IL-8
CC 6G4.2.5V11N35A light chain; and amino acids 24-253 of the humanized anti-
CC IL-8 6G4.2.5V11N35A heavy chain. The anti-IL-8 Mabs and fragments can be
CC used in diagnosis, for affinity purification of IL-8 from recombinant
CC cell culture or natural sources and for the treatment of inflammatory
CC disorders e.g. adult respiratory distress syndrome. Nucleic acids
CC encoding the anti-IL-8 Mab can be associated in a vector with another
CC gene encoding another protein or protein fragment to produce a fusion
CC protein which can make isolation and/or purification of the protein an
CC easier process

PT Treating acute lung injury in mammal by administering to mammal a 500 kD
PT conjugate comprising F(ab')₂ antibody fragment that binds to human
PT interleukin-8, covalently attached to one or two polyethylene glycol
PT molecules.
XX
PS Example G; Fig 29; 259pp; English.
XX
CC The invention relates to treating acute lung injury in a mammal,
CC comprising administering to the mammal an effective amount of a conjugate
CC of a single antibody fragment covalently attached to 1 or 2 polyethylene
CC glycol (PEG) molecules, where the antibody fragment is a F(ab')₂
CC comprising: (a) first chain that is either a light chain or a heavy chain
CC ; (b) a first opposite chain that is either a heavy chain opposite the
CC first light chain or a light chain opposite the first heavy chain; (c) a
CC second chain that is either a light chain or a heavy chain; and (d) a
CC second opposite chain that is either a heavy chain opposite the second
CC light chain or a light chain opposite the second heavy chain; where every
CC PEG molecule is covalently attached to a first cysteine residue in the
CC first or second chain that would ordinarily form a disulphide bridge with
CC a second cysteine residue in the first or second opposite chain, where
CC the disulphide bridge is avoided by substitution of another amino acid
CC residue for the second cysteine residue in the first or second opposite
CC chain, where the F(ab')₂ comprises an antigen binding site that binds to
CC human interleukin-8 (IL-8), and where the apparent site of the conjugate
CC is at least about 500 kD. The antigen binding sites may be derived from
CC murine monoclonal antibodies 5.12.14 or 6G4.2.5. The method is useful for
CC treating lung injury, including adult respiratory distress syndrome

CC (ARDS) in a mammal and inflammatory diseases (such as asthma,
 CC inflammatory bowel disease, psoriasis and sclerosis), ischemic
 CC reperfusion disorders, stroke, multiple sclerosis, meningitis,
 CC osteoarthritis, septic shock, autoimmune disease (e.g. rheumatoid
 CC arthritis), alcoholic hepatitis, cystic fibrosis and many other diseases
 CC and disorders listed in the specification. The present sequence
 CC represents a human antibody sequence included for comparison with the
 CC mouse humanised monoclonal antibody sequences

 XX
 XX PT Treating inflammatory disorder in a mammal, involves administering a
 PT conjugate of polyethylene glycol and a single antibody fragment
 PT comprising antigen binding site that binds to human interleukin-8, to
 PT mammal.
 XX
 XX PS Example 3G; Fig 29; 259pp; English.
 XX
 XX CC The invention relates to treating an inflammatory disorder in a mammal,
 CC comprising administering to the mammal, an effective amount of a
 CC conjugate of a single antibody fragment (e.g. the heavy or light chains
 CC of the humanised mouse monoclonal antibodies 5.12.14 and 6G4.2.5, which
 CC also have their intramolecular disulphide bridges ablated by substitution

CC mutations) covalently attached to one or two polyethylene glycol (PEG)
 CC molecules. The antibodies comprise an antigen binding site that binds to
 CC human interleukin-8 (IL-8), and the apparent size of the conjugate is at
 CC least 500 kDa. The method is useful for treating an inflammatory disorder
 CC e.g. ischemic reperfusion disorder such as surgical tissue reperfusion
 CC injury, myocardial ischaemia or myocardial infarction, or hypovolemic
 CC shock, in a mammal e.g. human. The method is useful for treating
 CC inflammatory disorders including psoriasis, atopic dermatitis, systemic
 CC scleroderma and sclerosis, responses associated with inflammatory bowel
 CC disease, ischemic reperfusion disorders, myocardial ischemic
 CC conditions, cerebral oedema secondary to stroke, cranial trauma,
 CC asphyxia, adult respiratory distress syndrome, acute-lung injury,
 CC Behcet's disease, dermatomyositis, polymyositis, multiple sclerosis,
 CC dermatitis, meningitis, encephalitis, uveitis, osteoarthritis, lupus
 CC nephritis, autoimmune diseases such as rheumatoid arthritis, Sjogren's
 CC syndrome, vasculitis, central nervous system inflammatory disorder,
 CC multiple organ injury syndrome secondary to septicemia or trauma,
 CC alcoholic hepatitis, bacterial pneumonia, antigen-antibody complex
 CC mediated diseases including glomerulonephritis, sepsis, sarcoidosis,
 CC immunopathologic responses to tissue/organ transplantation, inflammations
 CC of the lung, inflammatory bowel disease such as ulcerative colitis and
 CC asthma. The present sequence represents the light or heavy chain of human
 CC IgG, used to design the humanising mutations in the two mouse antibodies

XX
XX Purifying target protein from mixture containing host cell protein
XX involves subjecting mixture to non-affinity purification, high-
XX performance tangential flow filtration and isolating purified protein.
XX
XX Disclosure; SEQ ID NO 3; 77pp; English.
XX
XX The invention relates to a method for purifying a target protein from a
XX mixture containing a host cell protein. This method comprises subjecting
XX the mixture to a non-affinity purification followed by high-performance
XX tangential flow filtration (HPRFF) and isolating the protein in a purity
XX containing less than 100 parts/million (ppm) of the host cell protein,
XX where the method of the invention includes no affinity purification
XX process. The method of the invention is useful for purifying a target
XX protein from a mixture containing a host cell protein, and is useful for
XX incorporating the isolated protein into a pharmaceutical formulation.
XX Proteins purified using the method of the invention are useful in a

CC pharmaceutical respect, and are also useful in various diagnostic and
CC therapeutic purposes. The method of the invention is efficient in
CC purifying a target protein from a mixture containing a host cell protein,
CC and may also be effectively performed at low cost. The current sequence
CC represents the anti-CD11a rhumAb light chain amino acid sequence. This
CC particular protein was used to demonstrate the method of the invention.

XX Novel neuromodulatory agent (a human Igm monoclonal antibody), promoting
XX neurite outgrowth, regeneration, remyelination and neuroprotection in
XX central nervous system, useful to treat post-infectious
XX encephalomyelitis.
XX
XX Disclosure; Fig 36A-B; 219pp; English.
XX
XX The invention provides a neuromodulatory agent (I) capable of promoting
XX neurite outgrowth, regeneration, remyelination and neuroprotection in
XX central nervous system (CNS). (I) is capable of inducing remyelination,
XX promoting cellular proliferation of glial cells, and promoting Ca2+
XX signalling with oligodendrocytes. An humanised antibody to (I) can be
XX selected from antibody SHIGM22 (LYM 22), ebvHlgM M6119D10, ebv HlgM
XX CB2B68, AKR4, CB21E12, CB21E7 or MS119E5. (I) is useful for stimulating
XX remyelination of CNS axons, stimulating proliferation of glial cells in
XX CNS axons, or treating demyelinating disease of CNS in a mammal in need
XX of such therapy. (I) is capable of binding to structures and cells within
XX CNS. (I) is preferably useful for treating a demyelinating disease of CNS
XX of a mouse infected with Strain DA of Theiler's murine encephalomyelitis
XX (TMEV) or for treating a human being having multiple sclerosis, or a
XX human or domestic animal with a viral demyelinating disease, or a post-
XX neural disease of CNS. (I) is also useful for an in vitro method of
XX stimulating the proliferation of glial cells from mixed cell culture. (I)
XX is also useful for stimulating remyelination of CNS axons. The antibodies

CC are useful for preventing infection by a bacterium, virus or like
 CC pathogen that causes demyelination or other neurodegenerative condition
 CC in a subject. Methods where (I) is administered to a patient are useful
 CC for treating multiple sclerosis, Parkinson's disease, Alzheimer's
 CC disease, amyotrophic lateral sclerosis (ALS), a viral demyelinating
 CC disease, CNS diseases, and other conditions in the CNS where nerves are
 CC damaged as by trauma. The present sequence represents the mouse 09
 CC antibody kappa light chain 2 variable region

 XX New human immunoglobulin M antibody for treating or preventing a
 PT demyelinating disease of the central nervous system in a human or
 PT domestic animal, such as multiple sclerosis.
 XX
 XX Example 11; Fig 54; 159pp; English.
 XX
 CC The invention relates to an antibody (I) produced by injecting an
 CC immunocompetent host with an antibody peptide, and harvesting the
 CC antibody, where the peptide comprises a human anti-IGM antibody fragment
 CC given in the specification, or active fragments. Also included are
 CC stimulating remyelination of central nervous system (CNS) axons in a
 CC mammal (comprising administering a monoclonal antibody, or mixtures,
 CC monomers, active fragments, or recombinant antibodies derived from it,
 CC characterised by their ability to bind structures and cells within the
 CC CNS, including oligodendrocytes), stimulating the proliferation of glial

CC cells in CNS axons in a mammal (comprising administering a monoclonal
 CC antibody, or mixtures, monomers, active fragments, or recombinant
 CC antibodies derived from it, characterised by their ability to bind
 CC structures and cells within the CNS), treating or preventing a
 CC demyelinating disease of the CNS in a mammal (comprising administering a
 CC monoclonal antibody, or mixtures, monomers, active fragments, or
 CC recombinant antibodies derived from it, characterised by their ability to
 CC bind structures and cells within the CNS, and to stimulate remyelination
 CC of axons of the CNS), stimulating, in vitro, the proliferation of glial
 CC cells from mixed cell culture, stimulating remyelination of CNS axons in
 CC a mammal, a DNA sequence (or degenerate variant of it) which encodes an
 CC antibody (or a peptide analogue, hapten, or active fragment of it, where
 CC the DNA sequence consists of a sequence encoding an anti IGM antibody), a
 CC probe capable of screening for the antibody, an assay for screening drugs
 CC and other agents for the ability to modulate the production or mimic the
 CC activities of mAb SHIGM22, SHIGM46, or combinations of them, a
 CC recombinant virus transformed with recombinant antibody nucleic acids or
 CC vector, imaging a portion of the CNS using the antibody and diagnosing or
 CC monitoring demyelination and/or remyelination of the CNS comprising using
 CC CNS image. The antibody is used to stimulate remyelination of CNS axons,
 CC and to stimulate the proliferation of glial cells in CNS axons,
 CC optionally in vitro. The antibody is used to treat or prevent a
 CC demyelinating disease of the CNS in a human or domestic animal, such as
 CC multiple sclerosis, or a disease, other injury or dysfunction of the CNS,
 CC preferably the mammal is a mouse infected with Strain DA of Theiler's
 CC murine encephalomyelitis virus. The antibody is used to treat a spinal
 CC cord injury and used to screen drugs and other agents for the ability to
 CC modulate the production or mimic the activities of the antibody. The
 CC antibody can be used to image a portion of the CNS which can be used to
 CC diagnose or monitor demyelination and/or remyelination of the CNS. The
 CC present sequence is a variable region of a mouse anti-IGM antibody (or
 CC fragment).

CC given in the specification, or active fragments. Also included are
CC stimulating remyelination of central nervous system (CNS) axons in a

CC mammal (comprising administering a monoclonal antibody, or mixtures,
 CC monomers, active fragments, or recombinant antibodies derived from it,
 CC characterised by their ability to bind structures and cells within the
 CC CNS, including oligodendrocytes), stimulating the proliferation of glial
 CC cells in CNS axons in a mammal (comprising administering a monoclonal
 CC antibody, or mixtures, monomers, active fragments, or recombinant
 CC antibodies derived from it, characterised by their ability to bind
 CC structures and cells within the CNS), treating or preventing a
 CC demyelinating disease of the CNS in a mammal (comprising administering a
 CC monoclonal antibody, or mixtures, monomers, active fragments, or
 CC recombinant antibodies derived from it, characterised by their ability to
 CC bind structures and cells within the CNS, and to stimulate remyelination
 CC of axons of the CNS), stimulating, in vitro, the proliferation of glial
 CC cells from mixed cell culture, stimulating remyelination of CNS axons in
 CC a mammal, a DNA sequence (or degenerate variant of it) which encodes an
 CC antibody (or a peptide analogue, hapten, or active fragment of it, where
 CC the DNA sequence consists of a sequence encoding an anti Igm antibody), a
 CC probe capable of screening for the antibody, an assay for screening drugs
 CC and other agents for the ability to modulate the production or mimic the
 CC activities of MAb 8H1GM2, 8H1GM46, or combinations of them, a
 CC recombinant virus transformed with recombinant antibody nucleic acids or
 CC vector, imaging a portion of the CNS using the antibody and diagnosing or
 CC monitoring demyelination and/or remyelination of the CNS comprising using
 CC CNS image. The antibody is used to stimulate remyelination of CNS axons,
 CC and to stimulate the proliferation of glial cells in CNS axons,
 CC optionally in vitro. The antibody is used to treat or prevent a
 CC demyelinating disease of the CNS in a human or domestic animal, such as
 CC multiple sclerosis, or a disease, other injury or dysfunction of the CNS,
 CC preferably the mammal is a mouse infected with Strain DA of Theiler's
 CC murine encephalomyelitis virus. The antibody is used to treat a spinal
 CC cord injury and used to screen drugs and other agents for the ability to
 CC modulate the production or mimic the activities of the antibody. The
 CC antibody can be used to image a portion of the CNS which can be used to
 CC diagnose or monitor demyelination and/or remyelination of the CNS. The
 CC present sequence is a variable region of a mouse anti-Igm antibody (or
 CC fragment).

XX PT Phage display system for identification of binding site domains retaining
XX PT capacity to bind an epitope.
XX PS Claim 27; Fig 6.3; 152pp; English.
XX CC The invention relates to a method of identifying binding site domains
XX CC (BSD) that retain the capacity of binding to a predetermined epitope when
XX CC positioned C-terminal of at least one further domain in a recombinant bi-
XX CC or multivalent polypeptide. The method comprises (a) testing a panel of
XX CC BSD displayed on the surface of a biological display system as part of a
XX CC fusion protein for binding to a predetermined epitope, where the fusion
XX CC protein comprises an additional domain positioned N-terminal of the BSD
XX CC and an amino acid sequence that mediates anchoring of the fusion protein
XX CC to the surface of the display system; and (b) identifying a BSD that
XX CC binds to the predetermined epitope. The method is useful to identify bi-
XX CC or multivalent polypeptides that comprise antibody binding sites capable
XX CC of efficiently binding to the corresponding antigen. The polypeptides or
XX CC antibodies identified by the method are useful therapeutically and
XX CC diagnostically, for e.g. cancer and autoimmune diseases. ScFv-antibody
XX CC fragments that bind independently of their position within bifunctional
XX CC single-chain fusion proteins can be isolated from combinatorial antibody
XX CC libraries using the new in vitro method. Sequences AAY17957-965 represent

XX Example 2; Page 66-67; 81pp; German.

XX
XX This invention describes a method for the production of a novel cell
CC specific multivalent protein (MVP). The invention also describes (1) a
CC nucleic acid construct, which encodes an MVP; (2) a bacterium, yeast or
CC mammalian cell, in which the nucleic acid construct of (1) is introduced;
CC (3) the MVP bound to a vector; (4) production of an MVP; (5) an MVP
CC comprising a scFv with a binding site for the adenoviral fibre protein or
CC CD3 molecule and two VSBF units, bound by a peptide linker; and (6) a
CC complex comprising at least two MVPs as above (in which each single
CC ligand can be 0-1). The MVP, optionally bound to a vector, is useful for
CC production of a remedy to treat cells outside tissue by dressings for
CC skin, muscle, nervous systems, inner organs, hematopoietic systems, immune
CC systems, musculature, support tissues or joints and to immunize to
CC prevent or treat diseases

PS
XX
XX The invention relates to a cytotoxically active CD3 specific binding
CC construct comprising a first domain specifically binding to human CD3 and
CC an Ig-derived second binding domain. The CD3 specific binding construct
CC above or the construct produced by the process, nucleic acid molecule,
CC vector, or host is useful for the preparation of a pharmaceutical
CC composition for the prevention, treatment, or amelioration of a
CC proliferative disease, a tumor, an inflammatory disease, an immunological

CC disorder, an autoimmune disease, an infectious disease, viral disease,
 CC allergic reactions, parasitic reactions, graft-versus-host diseases, or
 CC host-versus-graft diseases. The cytotoxicity active CD3 specific binding
 CC construct is useful for treating, preventing, or ameliorating
 CC proliferative disease, a tumor, an inflammatory disease, an immunological
 CC disorder, an autoimmune disease, an infectious disease, viral disease,
 CC allergic reactions, parasitic reactions, graft-versus-host diseases, or
 CC host-versus-graft diseases. The present sequence represents the amino
 CC acid sequence of an anti-EpCam binder.

CC proteins (DITHP; ABR41136-ABR41812). The invention also relates to
CC polynucleotide sequences at least 90% identical to the dithp cDNA
CC sequences of the invention; recombinant vectors, host cells and
CC transgenic organisms comprising a dithp nucleic acid sequence; the
CC recombinant production of DITHP proteins; antibodies specific for DITHP
CC proteins; microarrays comprising dithp nucleic acid sequences; methods of
CC detecting dithp nucleotide and protein sequences; methods of screening
CC for compounds which specifically bind a DITHP protein; and methods of
CC assessing the toxicity of test compounds using a dithp hybridisation
CC probe. Dithp nucleic acid sequences and DITHP proteins may be used in the
CC diagnosis of a wide variety of conditions including cancer and other cell
CC proliferative disorders; autoimmune or inflammatory disorders; bacterial,
CC viral, fungal or parasitic infections; hormonal disorders; metabolic
CC disorders; neurological disorders; gastrointestinal disorders; transport
CC disorders; and connective tissue disorders. They may also be used to
CC screen for modulators of protein activity or gene expression. DITHP
CC proteins can additionally be used in analysis of the proteome of a tissue
CC or cell type and to induce antibodies. The dithp nucleic acids are
CC additionally useful in somatic or germline gene therapy of the disorders
CC mentioned above, as a source of antisense sequences, as a source of
CC probes and primers, in genotyping and identification of individuals, in
CC the generation of transgenic animal models of human disease or knock in
CC humanised animals, in toxicological testing, and in transcript imaging.
CC The present sequence represents a DITHP protein which has antigen
CC recognition activity. Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences

XX Use of an intracellularly binding immunoglobulin comprising at least one
 PT antibody variable chain, in preparing a medicament for degrading one or
 PT more specific antigens, or for treating specific antigen positive cancer,
 PT e.g. leukemia.

PS Example 1; SEQ ID NO 32; 86pp; English.

XX This invention relates to novel immunoglobulin molecules that comprise at
 CC least one antibody variable chain VH or VL framework region and are
 CC capable of binding to a specific antigens within an intracellular
 CC environment. Specifically, it refers to antibodies that can form an
 CC insoluble complex with a cognate antigen, such that it can then be target
 CC for degradation via the lysosome or proteosome systems. The present
 CC invention describes the specific target antigen as the oncogenic fusion
 CC protein BCR-ABL or the RAS antigen, such that this method can be used to
 CC prepare a cytostatic medicament for the cytoplasmic degradation or
 CC intracellular relocation of such an antigen or for the treatment of the
 CC specific antigen positive cancer i.e. leukaemia or lymphoma. Furthermore,
 CC the immunoglobulins may also be used for therapeutic, prophylactic or
 CC diagnostic applications both in vitro and in vivo, as well as for assay
 CC and reagent applications or in functional genomics. This polypeptide
 CC sequence is a variable light chain (VL) framework region of an
 CC intracellularly binding anti-ABL antibody of the invention.

PT Determining the ability of an immunoglobulin single domain to bind to a
 target in an intracellular environment by assessing the intracellular
 interaction between the immunoglobulin domain and the target by
 monitoring the signal.

PS Disclosure; SEQ ID NO 32; 66pp; English.

XX This invention relates to a novel method of determining the ability of an
 CC immunoglobulin single domain to bind to a target in an intracellular
 CC environment comprising assessing the intracellular interaction between
 CC the immunoglobulin domain and the target by monitoring the signal. The
 CC method comprises providing a first molecule and a second molecule, where
 CC stable interaction of the first and second molecules leads to the
 CC generation of a signal; providing a single intracellular immunoglobulin
 CC domain which is associated with the first molecule, where the single
 CC immunoglobulin domain is free of complementary immunoglobulin domains;
 CC providing an intracellular target which is associated with the second
 CC molecule, such that association of the immunoglobulin domain and the
 CC target leads to stable interaction of the first and second molecules and
 CC generation of the signal; and assessing the intracellular interaction
 CC between the immunoglobulin domain and the target by monitoring the
 CC signal. The methods are useful for determining the ability of an
 CC immunoglobulin single domain to bind to a target in an intracellular
 CC environment. The present sequence is that of a single chain variable
 CC fragment (scfv) protein which was used to illustrate the method of the
 CC invention.

 PT Inhibiting stenosis or restenosis of a blood vessel following vascular
 PT injury or angioplasty in a subject by administering agent which inhibits
 PT recruitment or adhesion of neutrophils, mononuclear cells to injury site.
 XX
 PS Claim 30; Fig 10; 108pp; English.
 XX
 CC The present invention relates to a new method of inhibiting stenosis or
 CC restenosis of a blood vessel following vascular injury in a subject. The
 CC new method comprises administering to the subject agents which inhibit
 CC the adhesion and/or recruitment of neutrophils and mononuclear cells to a
 CC site of vascular injury by binding CD18 or CCR2. The method of the
 CC invention inhibits stenosis or restenosis of a blood vessel following
 CC vascular injury arising from a vascular intervention procedure such as
 CC vascular by-pass or transplantation surgery. The method is also useful
 CC for treating a subject having an inflammatory disease or condition
 CC mediated by neutrophil and mononuclear cell activity e.g. asthma and
 CC graft versus host disease. Chronic inflammatory diseases of the lung,
 CC collagen diseases, and insulin-dependent diabetes mellitus can also be
 CC treated. The method is further useful for treating inflammatory bowel
 CC diseases, such as ulcerative colitis. Additional diseases or conditions
 CC include inflammatory or allergic diseases and conditions, including
 CC systemic anaphylaxis of hypersensitivity responses, drug allergies,
 CC psoriasis and inflammatory dermatoses, autoimmune diseases such as
 CC arthritis, graft rejection and other diseases including atherosclerosis.
 CC The present sequence represents complementarity determining region 1 (CDR
 CC 1) of the rat mAb YFC51.1 light chain variable region. This sequence is
 CC one of three CDRs (AAU09909-AAU09911) that can be used to inhibit
 CC stenosis or restenosis

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RT "50 million years of genomic stasis in endosymbiotic bacteria.";
 RT Science 296:2376-2379(2002).
 CC -1- FUNCTION: The reaction catalyzed by topoisomerases leads to the
 CC conversion of one topological isomer of DNA to another.
 CC -1- CATALYTIC ACTIVITY: ATP-independent breakage of single-stranded
 CC DNA, followed by passage and rejoining.
 CC -1- SUBUNIT: Monomer (By similarity).
 CC -1- MISCELLANEOUS: When a topoisomerase transiently breaks a DNA
 CC backbone bond, it simultaneously forms a protein-DNA link, in
 CC which a tyrosyl oxygen in the enzyme is joined to a DNA phosphorus
 CC at one end of the enzyme-severed DNA strand.
 CC -1- SIMILARITY: Belongs to the prokaryotic type I/III topoisomerase
 CC family.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX New humanised anti-CD11a antibody - used in immunoassays for CD11a, and
 PT also to treat conditions such as immunological or inflammatory disease.

XX Claim 8; Page 2; 66pp; English.

CC AAW62014-16 represent complementarity determining regions of the light
 CC chain variable region of humanised antibody MWM24F(ab)-8. The fragments
 CC were used to make a humanised anti-CD11a antibody that binds specifically

CC to the human CD11a I domain (MWM24 epitope). CD11a refers to the alpha
 CC subunit of lymphocyte function-associated antigen 1 (LFA-1) from any
 CC mammal. The humanised anti-CD11a antibodies are used to determine
 CC presence of CD11a in usual immunoassays or by in vivo imaging,
 CC particularly for diagnosis of CD11a-associated diseases (typically immune
 CC responses and inflammation such as psoriasis, Crohn's disease, rheumatoid
 CC arthritis, transplant rejection, leukaemia, etc

XX New humanized anti-CD11a antibody, useful for treating or preventing e.g.
 PT inflammation and transplant rejection, contains human heavy variable
 PT region complementarity determining regions.

XX Claim 4; Col 57-58; 38pp; English.

CC The present invention describes a humanised anti-CD11a antibody (Ab) that
 CC binds specifically to the human CD11a I-domain. The Ab has anti-
 CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
 CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
 CC involved in leucocyte adhesion associated with inflammatory and
 CC immunological responses. The Ab are used: (i) optionally when coupled to
 CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
 CC rhinitis, leukaemia, viral infections and many others, also for
 CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
 CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
 CC to active anticancer agent; and (v) for affinity chromatography. The Ab
 CC retain about the same activity in adhesion and mixed lymphocyte response
 CC assays as the murine antibodies from which they are derived. The murine

CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing LFA-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanized version of MHM24 had IC50 0.13 nM. The present
 CC sequence represents the light chain variable region CDR2 of the humanised
 CC anti-CD11a Ab

 PT Humanized anti-CD11a antibody useful for treating lymphocyte function-
 PT associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
 PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.
 XX
 PS Claim 8; SEQ ID NO 14; 43pp; English.
 CC The invention relates to a Humanised anti-cluster of differentiation
 CC (CD)11a antibody having specificity to human CD11a I-domain or CD11a with
 CC a kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (nm) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the nucleic acid, a host cell comprising
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The

CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is a CDR (complementarity determining region) of the
 CC light chain variable region (VL) of the humanised mouse anti-CD11a I
 CC domain monoclonal antibody MHM24.

PT Novel neuromodulatory agent (a human IGM monoclonal antibody), promoting
PT neurite outgrowth, regeneration, remyelination and neuroprotection in
PT central nervous system, useful to treat post-infectious
PT encephalomyelitis.
XX
PS Disclosure; Fig 36A-B; 219pp; English.

CC The invention provides a neuromodulatory agent (I) capable of promoting
CC neurite outgrowth, regeneration, remyelination and neuroprotection in
CC central nervous system (CNS). (I) is capable of inducing remyelination,
CC promoting cellular proliferation of glial cells, and promoting Ca2+
CC signaling with oligodendrocytes. An humanised antibody to (I) can be
CC selected from antibody SHIGM22 (LYM 22), ebvH1GM M6119D10, ebv H1GM
CC CB2B68, AKUR4, CB21E12, CB21E7 or MS119E5. (I) is useful for stimulating
CC remyelination of CNS axons, stimulating proliferation of glial cells in

CC CNS axons, or treating demyelinating disease of CNS in a mammal in need
CC of such therapy. (I) is capable of binding to structures and cells within
CC CNS. (I) is preferably useful for treating a demyelinating disease of CNS
CC of a mouse infected with Strain DA of Theiler's murine encephalomyelitis
CC (TMEM) or for treating a human being having multiple sclerosis, or a post-
CC human or domestic animal with a viral demyelinating disease, or a post-
CC neural disease of CNS. (I) is also useful for an in vitro method of
CC stimulating the proliferation of glial cells from mixed cell culture. (I)
CC is also useful for stimulating remyelination of CNS axons. The antibodies
CC are useful for preventing infection by a bacterium, virus or like
CC pathogen that causes demyelination or other neurodegenerative condition
CC in a subject. Methods where (I) is administered to a patient are useful
CC for treating multiple sclerosis, Parkinson's disease, Alzheimer's
CC disease, amyotrophic lateral sclerosis (ALS), a viral demyelinating
CC disease, CNS diseases, and other conditions in the CNS where nerves are
CC damaged as by trauma. The present sequence represents the mouse 09
CC antibody kappa light chain 2 variable region

PT New human immunoglobulin M antibody for treating or preventing a
PT demyelinating disease of the central nervous system in a human or
PT domestic animal, such as multiple sclerosis.
XX
PS Example 11; Fig 54; 159pp; English.
XX

CC The invention relates to an antibody (1) produced by injecting an
 CC immunocompetent host with an antibody peptide, and harvesting the
 CC antibody, where the peptide comprises a human anti-IgM antibody fragment
 CC given in the specification, or active fragments. Also included are
 CC stimulating remyelination of central nervous system (CNS) axons in a
 CC mammal (comprising administering a monoclonal antibody, or mixtures,
 CC monomers, active fragments, or recombinant antibodies derived from it,
 CC characterised by their ability to bind structures and cells within the
 CC CNS, including oligodendrocytes), stimulating the proliferation of glial
 CC cells in CNS axons in a mammal (comprising administering a monoclonal
 CC antibody, or mixtures, monomers, active fragments, or recombinant
 CC antibodies derived from it, characterised by their ability to bind
 CC structures and cells within the CNS), treating or preventing a
 CC demyelinating disease of the CNS in a mammal (comprising administering a
 CC monoclonal antibody, or mixtures, monomers, active fragments, or
 CC recombinant antibodies derived from it, characterised by their ability to
 CC bind structures and cells within the CNS, and to stimulate remyelination
 CC of axons of the CNS), stimulating, in vitro, the proliferation of glial
 CC cells from mixed cell culture, stimulating remyelination of CNS axons in
 CC a mammal, a DNA sequence (or degenerate variant of it) which encodes an
 CC antibody/or a peptide analogue, hapten, or active fragment of it, where
 CC the DNA sequence consists of a sequence encoding an anti-IgM antibody), a
 CC probe capable of screening for the antibody, an assay for screening drugs
 CC and other agents for the ability to modulate the production or mimic the
 CC activities of mAb SH1G42, SH1G46, or combinations of them, a
 CC recombinant virus transformed with recombinant antibody nucleic acids or
 CC vector, imaging a portion of the CNS using the antibody and diagnosing or
 CC monitoring demyelination and/or remyelination of the CNS comprising using
 CC CNS image. The antibody is used to stimulate remyelination of CNS axons,
 CC and to stimulate the proliferation of glial cells in CNS axons,
 CC optionally in vitro. The antibody is used to treat or prevent a
 CC demyelinating disease of the CNS in a human or domestic animal, such as
 CC multiple sclerosis, or a disease, other injury or dysfunction of the CNS,
 CC preferably the mammal is a mouse infected with Strain DA of Theiler's
 CC murine encephalomyelitis virus. The antibody is used to treat a spinal
 CC cord injury and used to screen drugs and other agents for the ability to
 CC modulate the production or mimic the activities of the antibody. The
 CC antibody can be used to image a portion of the CNS which can be used to
 CC diagnose or monitor demyelination and/or remyelination of the CNS. The
 CC present sequence is a variable region of a mouse anti-IgM antibody (or
 CC fragment).

XX
XX Killing cancer cells, by administering apoptosis-inducing therapy and
PT administering antibody specific for intracellular, cancer-associated
PT protein other than C35, or antibody specific for C35.
XX
XX
XX Disclosure; SEQ ID NO 10; 255pp; English.
XX
XX The invention relates to killing (M1) cancer cells, comprising
CC administering an apoptosis-inducing therapy to cancer cells, and
CC administering to the cells an antibody specific for an intracellular,

CC cancer-associated protein, provided that the protein is not C35 antigen,
CC where protein becomes exposed on the cell surface in cells undergoing
CC apoptosis, where the antibody is conjugated to or complexed with a toxin.
CC The non-C35 antigen protein is a premethylated protein. Also included are an
CC isolated antibody (I) specific for C35 (chosen from an antibody
CC comprising the VH region encoded by clone 1B3G, the VL region encoded by
CC clone 1B3K, the VH region encoded by clone 1P2G, the VL region encoded by
CC clone 1P2K, the VH region encoded by clone H0009, the VL region encoded
CC by clone L0010, an antibody comprising at least one of CDR1 or CDR2 of
CC the VH region encoded by AEA62495, an antibody comprising at least one of
CC CDR1 or CDR2 of the VH region encoded by AEA62499, an antibody comprising
CC at least one of CDR1, CDR2, or CDR3 of the VL region encoded by
CC AEA62497, a chimeric antibody, or a humanized antibody), a polynucleotide
CC encoding the antibody, a vector comprising the polynucleotide, a host
CC cell comprising the vector and a composition comprising the antibody and
CC a carrier. The method is useful for killing cancer cells in a mammal
CC preferably human in need of eradication of smaller tumors and/or
CC micrometastases, or in need of cancer treatment for C35-associated cancer
CC chosen from breast cancer, ovarian cancer, bladder cancer, lung cancer,
CC prostate cancer, pancreatic cancer, colon cancer, melanoma and other
CC hyperproliferative disorders. The antibody is useful for detecting,
CC diagnosing or monitoring C35-associated cancers. The antibody comprises a
CC chimeric antibody comprising human immunoglobulin constant regions fused
CC to the variable regions of mouse anti-C35 antibodies (named 1P2, 1B3, MAb
CC 165 and MAb 171). The present sequence represents a kappa chain variable
CC region of a mouse anti-C35 antibody.

 CC This sequence represents the light chain of the murine antibody MHM24,
 CC and was used to produce a mutant of the invention. The mutants are of a
 CC species-dependent antibody (Ab), and have an amino acid substitution in a
 CC variable region of the Ab, and binding affinity for an antigen (Ag) from
 CC a non-human mammal at least 10 times stronger than for the wild type Ab
 CC against the Ag. The mutant antibodies are particularly intended for
 CC administration to a non-human mammal in preclinical studies (e.g. of
 CC infection, immunity, haematopoiesis or transplantation). They can also be
 CC used diagnostically (to identify specific proteins) or therapeutically,
 CC e.g. where directed against CD1a (lymphocyte function-associated antigen

CC -1) or intercellular adhesion molecule-1 against a wide variety of
 CC inflammatory or autoimmune diseases, malignancies, transplant rejection,
 CC human immune deficiency virus infection and tumour cell invasion.
 CC Conversion to the mutant form allows useful antibodies to be produced
 CC from antibodies which normally have affinity for non-human analogues of
 CC the Ag too low to be of any use

XX PT New humanized anti-CD11a antibody, useful for treating or preventing e.g.
XX PT inflammation and transplant rejection, contains human heavy variable
XX PT region complementarily determining regions.
XX PS Example; Fig 1; 38pp; English.
XX CC The present invention describes a humanised anti-CD11a antibody (Ab) that
XX CC binds specifically to the human CD11a I-domain. The Ab has anti-
XX CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
XX CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
XX CC involved in leucocyte adhesion associated with inflammatory and
XX CC immunological responses. The Ab are used: (i) optionally when coupled to
XX CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
XX CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
XX CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
XX CC rhinitis, leukaemia, viral infections and many others, also for
XX CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
XX CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
XX CC to active anticancer agent; and (v) for affinity chromatography. The Ab
XX CC retain about the same activity in adhesion and mixed lymphocyte response
XX CC assays as the murine antibodies from which they are derived. The murine
XX CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
XX CC between Jurkat cells (expressing LFA-1) and normal epidermal
XX CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
XX CC The fully humanized version of MHM24 had IC50 0.13 nM. The present
XX CC sequence represents the amino acid sequence of murine MHM24 light chain,
XX CC which is used in the exemplification of the present invention

 XX New human immunoglobulin M antibody for treating or preventing a
 XX demyelinating disease of the central nervous system in a human or
 XX domestic animal, such as multiple sclerosis.
 XX
 XX Example 19; Fig 68; 159pp; English.
 XX
 XX The invention relates to an antibody (1) produced by injecting an
 XX immunocompetent host with an antibody peptide, and harvesting the
 XX antibody, where the peptide comprises a human anti-igm antibody fragment
 XX given in the specification, or active fragments. Also included are
 XX stimulating remyelination of central nervous system (CNS) axons in a
 XX mammal (comprising administering a monoclonal antibody, or mixtures,
 XX monomers, active fragments, or recombinant antibodies derived from it,
 XX characterised by their ability to bind structures and cells within the
 XX CNS, including oligodendrocytes), stimulating the proliferation of glial
 XX cells in CNS axons in a mammal (comprising administering a monoclonal
 XX antibody, or mixtures, monomers, active fragments, or recombinant
 XX antibodies derived from it, characterised by their ability to bind
 XX structures and cells within the CNS), treating or preventing a
 XX demyelinating disease of the CNS in a mammal (comprising administering a
 XX monoclonal antibody, or mixtures, monomers, active fragments, or
 XX recombinant antibodies derived from it, characterised by their ability to
 XX bind structures and cells within the CNS, and to stimulate remyelination
 XX of axons of the CNS), stimulating, in vitro, the proliferation of glial
 XX cells from mixed cell culture, stimulating remyelination of CNS axons in

a mammal, a DNA sequence (or degenerate variant of it) which encodes an
 antibody (or a peptide analogue, hapten, or active fragment of it, where
 the DNA sequence consists of a sequence encoding an anti Igm antibody), a
 probe capable of screening for the antibody, an assay for screening drugs
 and other agents for the ability to modulate the production or mimic the
 activities of mAb shlgm22, shlgm46, or combinations of them, a
 recombinant virus transformed with recombinant antibody nucleic acids or
 vector, imaging a portion of the CNS using the antibody and diagnosing or
 monitoring demyelination and/or remyelination of the CNS comprising using
 CNS image. The antibody is used to stimulate remyelination of CNS axons,
 and to stimulate the proliferation of glial cells in CNS axons,
 optionally in vitro. The antibody is used to treat or prevent a
 demyelinating disease of the CNS in a human or domestic animal, such as
 multiple sclerosis, or a disease, other injury or dysfunction of the CNS,
 preferably the mammal is a mouse infected with Strain DA of Theiler's
 murine encephalomyelitis virus. The antibody is used to treat a spinal
 cord injury and used to screen drugs and other agents for the ability to
 modulate the production or mimic the activities of the antibody. The
 antibody can be used to image a portion of the CNS which can be used to
 diagnose or monitor demyelination and/or remyelination of the CNS. The
 present sequence is a variable region of a mouse anti-igm antibody (or
 fragment).

XX chromatography to 3-20 degrees C, where protein A leaching is reduced.
XX
PS Disclosure; SEQ ID NO 5; 27pp; English.
XX
XX The invention relates to a method of purifying a protein which comprises
XX a CH2/CH3 region by protein A affinity chromatography. The method
XX involves reducing the temperature of a composition comprising the protein
XX and one or more impurities subjected to protein A affinity chromatography
XX to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably
XX the protein is antibody. The antibody is selected from Trastuzumab,
XX humanized 2C4, humanized CD1a antibody, and humanized VEGF antibody.
XX Preferably, the antibody binds HER2 antigen, where the antibody is
XX Trastuzumab or humanized 2C4. The protein is an immunoadhesin,
XX specifically a TNP receptor immunoadhesin. The methods are useful for
XX purifying a protein, which comprises a CH2/CH3 region by protein A
XX affinity chromatography and for reducing leaching of protein A during
XX protein A affinity chromatography. The current sequence represents the
XX variable light chain amino acid sequence of CD1a.

 DR Purifying target protein from mixture containing host cell protein
 PT involves subjecting mixture to non-affinity purification, high-
 PT performance tangential flow filtration and isolating purified protein.
 XX disclosure; SEQ ID NO 3; 77pp; English.
 PS
 XX The invention relates to a method for purifying a target protein from a
 CC mixture containing a host cell protein. This method comprises subjecting
 CC the mixture to a non-affinity purification followed by high-performance
 CC tangential flow filtration (HPTFF) and isolating the protein in a purity
 CC containing less than 100 parts/million (ppm) of the host cell protein,
 CC where the method of the invention includes no affinity purification
 CC process. The method of the invention is useful for purifying a target
 CC protein from a mixture containing a host cell protein, and is useful for
 CC incorporating the isolated protein into a pharmaceutical formulation.
 CC Proteins purified using the method of the invention are useful in a
 CC pharmaceutical respect, and are also useful in various diagnostic and
 CC therapeutic purposes. The method of the invention is efficient in
 CC purifying a target protein from a mixture containing a host cell protein,
 CC and may also be effectively performed at low cost. The current sequence
 CC represents the anti-CD11a rhumAb light chain amino acid sequence. This
 CC particular protein was used to demonstrate the method of the invention.

 PT Phage display system for identification of binding site domains retaining
 PT capacity to bind an epitope.
 XX
 PS Claim 27; Fig 6.3; 152pp; English.
 XX
 CC The invention relates to a method of identifying binding site domains
 CC (BSD) that retain the capacity of binding to a predetermined epitope when
 CC positioned C-terminal of at least one further domain in a recombinant bi-
 CC or multivalent polypeptide. The method comprises (a) testing a panel of
 CC BSD displayed on the surface of a biological display system as part of a
 CC fusion protein for binding to a predetermined epitope, where the fusion
 CC protein comprises an additional domain positioned N-terminal of the BSD
 CC and an amino acid sequence that mediates anchoring of the fusion protein
 CC to the surface of the display system; and (b) identifying a BSD that
 CC binds to the predetermined epitope. The method is useful to identify bi-
 CC or multivalent polypeptides that comprise antibody binding sites capable
 CC of efficiently binding to the corresponding antigen. The polypeptides or
 CC antibodies identified by the method are useful therapeutically and
 CC diagnostically, for e.g. cancer and autoimmune diseases. scFv-antibody
 CC fragments that bind independently of their position within bifunctional
 CC single-chain fusion proteins can be isolated from combinatorial antibody
 CC libraries using the new in vitro method. Sequences AAY17957-965 represent

New cytotoxically active CD3 specific binding construct comprises a first

domain specifically binding to human CD3 and an Ig-derived second binding

domain, useful for treating, preventing, or ameliorating, e.g.

proliferative disease.

Claim 20; SEQ ID NO 31; 639pp; English.

The invention relates to a cytotoxically active CD3 specific binding

construct comprising a first domain specifically binding to human CD3 and

an Ig-derived second binding domain. The CD3 specific binding construct

above or the construct produced by the process, nucleic acid molecule,

vector, or host is useful for the preparation of a pharmaceutical

composition for the prevention, treatment, or amelioration of a

proliferative disease, a tumor, an inflammatory disease, an immunological

disorder, an autoimmune disease, an infectious disease, viral disease,

allergic reactions, parasitic reactions, graft-versus-host diseases, or

host-versus-graft diseases. The cytotoxically active CD3 specific binding

construct is useful for treating, preventing, or ameliorating

CC proliferative disease, a tumor, an inflammatory disease, an immunological

CC disorder, an autoimmune disease, an infectious disease, viral disease,

CC allergic reactions, parasitic reactions, graft-versus-host diseases, or

CC host-versus-graft diseases. The present sequence represents the amino

CC acid sequence of an anti-Epcam binder.

XX
PT New cytotoxically active CD3 specific binding construct comprises a first
PT domain specifically binding to human CD3 and an Ig-derived second binding
PT domain, useful for treating, preventing, or ameliorating, e.g.
PT proliferative disease.
XX
PS Claim 20; SEQ ID NO 49; 639pp; English.
XX
CC The invention relates to a cytotoxically active CD3 specific binding
CC construct comprising a first domain specifically binding to human CD3 and
CC an Ig-derived second binding domain. The CD3 specific binding construct
CC above or the construct produced by the process, nucleic acid molecule,
CC vector, or host is useful for the preparation of a pharmaceutical
CC composition for the prevention, treatment, or amelioration of a
CC proliferative disease, a tumor, an inflammatory disease, an immunological
CC disorder, an autoimmune disease, an infectious disease, viral disease,
CC allergic reactions, parasitic reactions, graft-versus-host diseases, or
CC host-versus-graft diseases. The cytotoxically active CD3 specific binding
CC construct is useful for treating, preventing, or ameliorating
CC proliferative disease, a tumor, an inflammatory disease, an immunological
CC disorder, an autoimmune disease, an infectious disease, viral disease,
CC allergic reactions, parasitic reactions, graft-versus-host diseases, or
CC host-versus-graft diseases. The present sequence represents the amino
CC acid sequence of deimmunized construct 3-ixanti-CD3.

PT Cell specific multivalent proteins useful for targeting specific cells
PT for the treatment of disease.

XX Example 2; Page 67-69; 81pp; German.
XX

CC This invention describes a method for the production of a novel cell
CC specific multivalent protein (MVP). The invention also describes (1) a
CC nucleic acid construct, which encodes an MVP; (2) a bacterium, yeast or
CC mammalian cell, in which the nucleic acid construct of (1) is introduced;
CC (3) the MVP bound to a vector; (4) production of an MVP; (5) an MVP
CC comprising a scFv with a binding site for the adenoviral fibre protein or
CC CD3 molecule and two VEGF units, bound by a peptide linker; and (6) a
CC complex comprising at least two MVPs as above (in which each single
CC ligand can be 0=1). The MVP, optionally bound to a vector, is useful for
CC production of a remedy to treat cells outside tissue by dressings for
CC skin, mucus, nervous systems, inner organs, hematopoietic systems, immune
CC systems, musculature, support tissues or joints and to immunize to
CC prevent or treat diseases

PT New polynucleotides, useful as hybridization probes, oligomers or
PT primers, for chromosome or gene mapping, for the recombinant production
PT of proteins, and for generating antisense DNA or RNA.

Claim 20; SEQ ID NO 1607; 571p; English.

CC The present sequence represents a polypeptide (II) with biological
CC activity, which is encoded by an isolated polynucleotide sequence (I);
CC (2) an expression vector comprising (I); (3) a host cell genetically
CC engineered to comprise (I) which is operatively associated with a
CC regulatory sequence that modulates expression of (I) in the host cell;
CC (4) a polypeptide (II) encoded by (I); (5) a composition comprising the
CC polypeptide of (4) and a carrier; (6) an antibody directed against the
CC polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a
CC sample; (8) identifying a compound that binds to the polypeptide of (4);
CC (9) producing the polypeptide of (4); and (10) a collection of
CC polynucleotides comprising at least one of the polynucleotide sequences
CC (I). The polynucleotides (I) can be used as hybridisation probes,
CC oligomers or primers, for chromosome or gene mapping, for the recombinant
CC production of proteins, and for generating antisense DNA or RNA.

PT  New conjugates of nonproteinaceous polymers with antibody fragments, used
PT  for treating inflammatory disorders.
XX
PS  Disclosure; Fig 29; 360pp; English.
XX
CC  The present invention describes a novel conjugate having one or more
CC  antibody fragments covalently attached to one or more nonproteinaceous
CC  polymer molecules, where the apparent size of the conjugate is at least
CC  about 500 kDa. Conjugates of antibody fragments which bind the human
CC  interleukin (IL) 8 with a nonproteinaceous polymer can be used for
CC  treating inflammatory disorders e.g. acute lung injury, ischaemic
CC  reperfusion disorder, and autoimmune diseases. They can also be used for
CC  treating e.g. inflammatory skin diseases including psoriasis and atopic
CC  dermatitis, systemic sclerosis and scleritis, and asthmatic diseases.
CC  The conjugates can also be used as reagents in an animal model system for
CC  in vivo study of the biological functions of the antigen recognised by
CC  the conjugate. The present sequence represents the human light chain
CC  kappa-I consensus framework from the present invention

PT  New nucleic acid molecule encodes a polypeptide which is an anti-
PT  interleukin-8 monoclonal antibody or antibody fragment useful for the
PT  production of anti-interleukin-8 monoclonal antibodies or fragments.
XX
PS  Example; Fig 29; 188pp; English.
XX
CC  The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody
CC  (MAb). The anti-IL-8 MAb comprises a sequence containing the CDRs
CC  (complementarity determining regions) of the humanized anti-IL-8
CC  6G4.2.SV1IN35A light chain; and amino acids 24-253 of the humanized anti-
CC  IL-8 6G4.2.SV1IN35A heavy chain. The anti-IL-8 MAb and fragments can be
CC  used in diagnosis, for affinity purification of IL-8 from recombinant
CC  cell culture or natural sources and for the treatment of inflammatory
CC  disorders e.g. adult respiratory distress syndrome. Nucleic acids
CC  encoding the anti-IL-8 MAb can be associated in a vector with another
CC  gene encoding another protein or protein fragment to produce a fusion an
CC  protein which can make isolation and/or purification of the protein an
CC  easier process

XX
XX Humanized anti-interleukin 8 monoclonal antibody variant useful for
XX treating inflammatory disorders, such as adult respiratory distress
XX syndrome, hypovolemic shock and ulcerative colitis.
XX
XX Disclosure; Col 161-162; 240pp; English.
XX
XX The present invention provides a number of humanised monoclonal anti-IL-8
XX antibodies which can be used in the diagnosis and treatment of
XX inflammatory disorders, including adult respiratory distress syndrome,
XX septic shock, multiple organ failure, bacterial pneumonia and
XX inflammatory bowel disease. The present sequence comprises one of the
XX antibodies of the invention

XX
XX Treating acute lung injury in mammal by administering to mammal a 500 kD
XX conjugate comprising F(ab')2 antibody fragment that binds to human
XX interleukin-8, covalently attached to one or two polyethylene glycol
XX molecules.

```

```

XX
XX Example G; Fig 29; 259pp; English.
PS
XX
XX The invention relates to treating acute lung injury in a mammal,
XX comprising administering to the mammal an effective amount of a conjugate
XX of a single antibody fragment covalently attached to 1 or 2 polyethylene
XX glycol (PEG) molecules, where the antibody fragment is a F(ab')2
XX comprising: (a) a first chain that is either a light chain or a heavy chain
XX ; (b) a first opposite chain that is either a heavy chain opposite the
XX first light chain or a light chain opposite the first heavy chain; (c) a
XX second chain that is either a light chain or a heavy chain; and (d) a
XX second opposite chain that is either a heavy chain opposite the second
XX light chain or a light chain opposite the second heavy chain; where every
XX PEG molecule is covalently attached to a first cysteine residue in the
XX first or second chain that would ordinarily form a disulphide bridge with
XX a second cysteine residue in the first or second opposite chain, where
XX the disulphide bridge is avoided by substitution of another amino acid
XX residue for the second cysteine residue in the first or second opposite
XX chain, where the F(ab')2 comprises an antigen binding site that binds to
XX human interleukin-8 (IL-8), and where the apparent size of the conjugate
XX is at least about 500 kD. The antigen binding sites may be derived from
XX murine monoclonal antibodies 5.12.14 or 6G4.2.5. The method is useful for
XX treating lung injury, including adult respiratory distress syndrome
XX (ARDS) in a mammal and inflammatory diseases (such as asthma,
XX inflammatory bowel disease, psoriasis and sclerosis), ischaemic
XX reperfusion disorders, stroke, multiple sclerosis, meningitis,
XX osteoarthritis, septic shock, autoimmune disease (e.g. rheumatoid
XX arthritis), alcoholic hepatitis, cystic fibrosis and many other diseases
XX and disorders listed in the specification. The present sequence
XX represents a human antibody sequence included for comparison with the
XX mouse humanised monoclonal antibody sequences

XX
XX Treating inflammatory disorder in a mammal, involves administering a
PT conjugate of polyethylene glycol and a single antibody fragment
PT comprising antigen binding site that binds to human interleukin-8, to
PT mammal.
XX
XX Example 3G; Fig 29; 259pp; English.
XX
XX The invention relates to treating an inflammatory disorder in a mammal,
XX comprising administering to the mammal, an effective amount of a
XX conjugate of a single antibody fragment (e.g. the heavy or light chains
XX of the humanised mouse monoclonal antibodies 5.12.14 and 6G4.2.5, which
XX also have their intramolecular disulphide bridges ablated by substitution
XX mutations) covalently attached to one or two polyethylene glycol (PEG)
XX molecules. The antibodies comprise an antigen binding site that binds to
XX human interleukin-8 (IL-8), and the apparent size of the conjugate is at
XX least 500 kDa. The method is useful for treating an inflammatory disorder
XX e.g. ischaemic reperfusion disorder such as surgical tissue reperfusion
XX injury, myocardial ischaemia or myocardial infarction, or hypovolemic
XX shock, in a mammal e.g. human. The method is useful for treating
XX inflammatory disorders including psoriasis, atopic dermatitis, systemic
XX scleroderma and scleriosis, responses associated with inflammatory bowel
XX disease, ischaemic reperfusion disorders, myocardial ischemic
XX conditions, cerebral oedema secondary to stroke, cranial trauma,
XX asphyxia, adult respiratory distress syndrome, acute lung injury,
XX Behcet's disease, dermatomyositis, polymyositis, multiple sclerosis,
XX dermatitis, meningitis, encephalitis, uveitis, osteoarthritis, lupus
XX nephritis, autoimmune diseases such as rheumatoid arthritis, Sjogren's
XX syndrome, vasculitis, central nervous system inflammatory disorder,
XX multiple organ injury syndrome secondary to septicemia or trauma,
XX alcoholic hepatitis, bacterial pneumonia, antigen-antibody complex,
XX mediated diseases including glomerulonephritis, sepsis, sarcoidosis,
XX immunopathologic responses to tissue/organ transplantation, inflammations
XX of the lung, inflammatory bowel disease such as ulcerative colitis and
XX asthma. The present sequence represents the light or heavy chain of human
XX IgG, used to design the humanising mutations in the two mouse antibodies

XX
XX Novel conjugates comprising antibody fragments covalently attached to
PT nonproteinaceous polymer molecules, useful for treating inflammatory
PT diseases, acute lung injury, ischemic reperfusion injury, pneumonia and
PT asthma.
XX
XX Example; Fig 29; 266pp; English.
XX
XX The invention relates to novel conjugates comprising antibody fragments
XX covalently attached to nonproteinaceous polymer molecules. The invention
XX is useful for treating interleukin (IL)-8 mediated diseases or disorders
XX such as inflammatory diseases, acute lung injury e.g. adult respiratory
XX distress syndrome (ARDS), ischaemic reperfusion injury e.g. myocardial
XX infarction, hypovolemic shock, inflammatory bowel disease e.g. ulcerative
XX colitis, bacterial pneumonia and asthma. The invention is also useful as
XX a reagent in an animal model system for in vivo study of the biological
XX functions of the antigen recognised by the conjugate. The present
XX sequence is human light chain kappa consensus framework protein. This
XX sequence is used in the exemplification of the invention

PT genes from Drosophila and for elucidating cell signalling and cell-cell
PT interactions.
XX
PS Disclosure; SEQ ID NO 16788; 21bp + Sequence Listing; English.
XX
XX The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (AB161676-AB130511), expressed DNA
CC sequences (AB161840-AB16175) and the encoded proteins (AB57737-
CC AB872072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX AAC74446 to AAC7606 encode the proteins given in AAB40237 to AAB43397,
CC which represent the human ORFX open reading frames 1 to 3161. The ORFX
CC sequences have activities such as: cytostatic; hepatotropic; vulnery;
CC antiparasitic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
CC anticonvulsant; antidiabetic; immunosuppressant; immunostimulant;
CC cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive;
CC dermatological; immunosuppressive; antiinflammatory; antibacterial;
CC antiviral; antifungal; antineumatic; antithyroid; and antianemic. The
CC sequences can be used for determining the presence of or predisposition
CC to, or preventing or treating pathological conditions associated with an
CC ORFX-associated disorder. The nucleic acids can be used to express ORFX
CC proteins in gene therapy vectors. The proteins and nucleic acids may be
CC used to treat cancers, proliferative disorders, neurodegenerative
CC disorders, osteoarthritis, graft vs host disease, cardiovascular disease,
CC diabetes mellitus, hypertension, hypothyroidism, cholesterol ester
CC storage, systemic lupus erythematosus, severe combined immunodeficiency
CC (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
CC disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and
CC cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to
CC enhance coagulation; to inhibit thrombosis; and as a contraceptive

 CC -1- FUNCTION: May be an RNA-binding protein involved in control of an
 CC RNA processing pathway that influences the regulation of cell
 CC growth in early log phase. Can bind to RNA and single-stranded DNA
 CC but not double-stranded DNA.
 CC -1- INTERACTION:
 CC P32770:NRPI; NbExp=1; IntAct=EBI-12002, EBI-12260;
 CC -1- SIMILARITY: Contains 3 RRM (RNA recognition motif) domains.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT New humanized anti-CD11a antibody, useful for treating or preventing e.g.

PT region complementarity determining regions.

PS Claim 4; COL 57-58; 38pp; English.

The present invention describes a humanised anti-CD11a antibody (Ab) that binds specifically to the human CD11a I-domain. The Ab has anti-inflammatory, immunosuppressant, antitumour and antiviral activities. The Ab blocks lymphocyte function-associated antigen (LFA-1) which is involved in leucocyte adhesion associated with inflammatory and immunological responses. The Ab are used: (i) optionally when coupled to a cytotoxin, to treat or prevent disorders mediated by lymphocyte function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis, inflammatory bowel disease, eczema, systemic lupus erythematosus, rheitis, leukaemia, viral infections and many others, also for inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for tumour pre-treatment; (iv) for delivery of enzymes that convert prodrugs to active anticancer agent; and (v) for affinity chromatography. The Ab retain about the same activity in adhesion and mixed lymphocyte response assays as the murine antibodies from which they are derived. The murine

CC anti-CD11a antibody MEM24 has IC50 0.09 nM for preventing adhesion
CC between Jurkat cells (expressing LFA-1) and normal epidermal
CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
CC The fully humanized version of MEM24 had IC50 0.13 nM. The present
CC sequence represents the light chain variable region CDR3 of the humanised
CC anti-CD11a Ab

XX Humanized anti-CD11a antibody useful for treating lymphocyte function-
XX associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
XX ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.
XX
XX Claim 8; SEQ ID NO 15; 43pp; English.
XX
XX The invention relates to a Humanised anti-cluster of differentiation
XX (CD11a) antibody having specificity to human CD11a I-domain or CD11a with
XX a kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
XX inhibition (IC50) (nm) value of not more than 1 nM in mixed lymphocyte
XX response assay or for preventing adhesion of Jurkat cells to normal human
XX epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
XX -1. Also included are a kit comprising the antibody and instructions for
XX use to detect the CD11a protein, an isolated nucleic acid encoding the
XX antibody, a vector comprising the nucleic acid, a host cell comprising
XX the vector and producing the antibody by culturing the cell so that the
XX antibody is expressed. The antibody binds to epitope MEM24 on CD11a. The

CC antibody is useful for determining the presence of CD11a protein and for
CC treating lymphocyte function-associated antigen I mediated disorder such
CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
CC and diabetes mellitus. The antibody is useful when conjugated to a
CC prodrug activating enzyme, or as an affinity purification agent. The
CC present sequence is a CDR (complementarity determining region) of the
CC light chain variable region (VL) of the humanised mouse anti-CD11a I
CC domain monoclonal antibody MEM24.

XX PT and preventing infectious diseases, psoriasis, inflammatory bowel
XX PT disease, allergic conditions, autoimmune diseases, or cancer.
XX
XX Example; SEQ ID NO 60; 54pp; English.
XX
XX The present invention relates to an antibody mutant of a species-
XX dependent antibody with beneficial properties. The invention is useful

for treating and preventing infectious diseases such as human immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin disease such as psoriasis, inflammatory bowel diseases such as Crohn's disease and ulcerative colitis, adult respiratory distress syndrome, allergic diseases such as eczema and asthma, autoimmune diseases such as rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes mellitus, Reynaud's syndrome, immunological diseases such as tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary disease (COPD), CNS inflammatory disorder, skin hypersensitivity disorders such as poison ivy and poison oak, B-cell malignancies such as chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host disease and cancer. The invention is also useful in gene therapy. The present sequence is humanised murine anti-human CD11a monoclonal antibody (MHM24) CDR-1/3 peptide. This sequence is used in the exemplification of the invention.

Killing cancer cells, by administering apoptosis-inducing therapy and administering antibody specific for intracellular, cancer-associated protein other than C35, or antibody specific for C35.

Disclosure, SEQ ID NO 10, 255bp; English.

The invention relates to killing (M1) cancer cells, comprising administering an apoptosis-inducing therapy to cancer cells, and administering to the cells an antibody specific for an intracellular, cancer-associated protein, provided that the protein is not C35 antigen, where protein becomes exposed on the cell surface in cells undergoing apoptosis, where the antibody is conjugated to or complexed with a toxin. The non-C35 antigen protein is a prenylated protein. Also included are an isolated antibody (I) specific for C35 (chosen from an antibody comprising the VH region encoded by clone 1B3G, the VL region encoded by

clone 1B3K, the VH region encoded by clone 1F2G, the VL region encoded by clone 1F2K, the VH region encoded by clone H0609, the VL region encoded by clone L0010, an antibody comprising at least one of CDR1 or CDR2 of the VH region encoded by AEA62495, an antibody comprising at least one of CDR1 or CDR2 of the VH region encoded by AEA62499, an antibody comprising at least one of CDR1, CDR2, or CDR3 of the VL region encoded by AEA62497, a chimeric antibody, or a humanized antibody, a polynucleotide encoding the antibody, a vector comprising the polynucleotide, a host cell comprising the vector and a composition comprising the antibody and a carrier. The method is useful for killing cancer cells in a mammal preferably human in need of eradication of smaller tumors and/or micrometastases, or in need of cancer treatment for C35-associated cancer chosen from breast cancer, ovarian cancer, bladder cancer, lung cancer, prostate cancer, pancreatic cancer, colon cancer, melanoma and other hyperproliferative disorders. The antibody is useful for detecting, diagnosing or monitoring C35-associated cancers. The antibody comprises a chimeric antibody comprising human immunoglobulin constant regions fused to the variable regions of mouse anti-35 antibodies (named 1F2, 1B3, MAb 165 and MAb 171). The present sequence represents a kappa chain variable region of a mouse anti-C35 antibody.

New humanised anti-CD11a antibody - used in immunoassays for CD11a, and also to treat conditions such as immunological or inflammatory disease.

Claim 9; Page 48; 66pp; English.

The present sequence represents the light chain variable region of a humanised anti-CD11a antibody that binds specifically to the human CD11a I domain (MHM24 epitope). CD11a refers to the alpha subunit of lymphocyte

CC function-associated antigen 1 (LFA-1) from any mammal. The humanised anti-
 CC CD11a antibodies are used to determine presence of CD11a in usual
 CC immunosays or by in vivo imaging, particularly for diagnosis of CD11a-
 CC associated diseases (typically immune responses and inflammation such as
 CC psoriasis, Crohn's disease, rheumatoid arthritis, transplant rejection,
 CC leukaemia, etc

XX This sequence represents the light chain of the murine antibody MEM24,
 CC and was used to produce a mutant of the invention. The mutants are of a
 CC species-dependent antibody (Ab), and have an amino acid substitution in a
 CC variable region of the Ab, and binding affinity for an antigen (Ag) from
 CC a non-human mammal at least 10 times stronger than for the wild type Ab
 CC against the Ag. The mutant antibodies are particularly intended for
 CC administration to a non-human mammal in preclinical studies (e.g. of
 CC infection, immunity, haematopoesis or transplantation). They can also be
 CC used diagnostically (to identify specific proteins) or therapeutically,
 CC e.g. where directed against CD11a (lymphocyte function-associated antigen
 CC -1) or intercellular adhesion molecule-1 against a wide variety of
 CC inflammatory or autoimmune diseases, malignancies, transplant rejection,
 CC human immune deficiency virus infection and tumour cell invasion.
 CC Conversion to the mutant form allows useful antibodies to be produced
 CC from antibodies which normally have affinity for non-human analogues of
 CC the Ag too low to be of any use

PT New humanised anti-CD11a antibody, useful for treating or preventing e.g.
PT inflammation and transplant rejection, contains human heavy variable
PT region complementarily determining regions.

PS Example; Fig 1; 38pp; English.

XX The present invention describes a humanised anti-CD11a antibody (Ab) that
CC binds specifically to the human CD11a I-domain. The Ab has anti-
CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
CC involved in leucocyte adhesion associated with inflammatory and
CC immunological responses. The Ab are used: (i) optionally when coupled to
CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
CC rhinitis, leukaemia, viral infections and many others, also for
CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
CC to active anticancer agent; and (v) for affinity chromatography. The Ab
CC retain about the same activity in adhesion and mixed lymphocyte response
CC assays as the murine antibodies from which they are derived. The murine
CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
CC between Jurkat cells (expressing LFA-1) and normal epidermal
CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
CC The fully humanized version of MHM24 had IC50 0.13 nM. The present
CC sequence represents the amino acid sequence of murine MHM24 light chain,
CC which is used in the exemplification of the present invention

XX PT Purifying a protein, e.g. antibody or immunoadhesin, comprises reducing
XX the temperature of a composition subjected to protein A affinity
XX chromatography to 3-20 degrees C, where protein A leaching is reduced.
XX PS Disclosure; SEQ ID NO 5; 27pp; English.
XX CC The invention relates to a method of purifying a protein which comprises
XX a CH2/CH3 region by protein A affinity chromatography. The method
XX involves reducing the temperature of a composition comprising the protein
XX and one or more impurities subjected to protein A affinity chromatography
XX to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably
XX the protein is antibody. The antibody is selected from Trastuzumab,
XX humanized 2C4, humanized CD1a antibody, and humanized VEGF antibody.
XX Preferably, the antibody binds HER2 antigen, where the antibody is
XX Trastuzumab or humanized 2C4. The protein is an immunoadhesin,
XX specifically a TNF receptor immunoadhesin. The methods are useful for
XX purifying a protein, which comprises a CH2/CH3 region by protein A
XX affinity chromatography and for reducing leaching of protein A during
XX protein A affinity chromatography. The current sequence represents the
XX variable light chain amino acid sequence of CD1a.

XX New conjugates of nonproteinaceous polymers with antibody fragments, used
PT for treating inflammatory disorders.
XX Disclosure; Fig 29; 360pp; English.
XX The present invention describes a novel conjugate having one or more
CC antibody fragments covalently attached to one or more nonproteinaceous
CC polymer molecules, where the apparent size of the conjugate is at least
CC about 500 kDa. Conjugates of antibody fragments which bind the human
CC interleukin (IL) 8 with a nonproteinaceous polymer can be used for
CC treating inflammatory disorders e.g. acute lung injury, ischemic
CC reperfusion disorder, and autoimmune diseases. They can also be used for
CC treating e.g. inflammatory skin diseases including psoriasis and atopic
CC dermatitis, systemic sclerosis and sclerodermis, and asthmatic diseases.
CC The conjugates can also be used as reagents in an animal model system for
CC in vivo study of the biological functions of the antigen recognised by
CC the conjugate. The present sequence represents the human light chain
CC kappa-I consensus framework from the present invention

PT Treating acute lung injury in mammal by administering to mammal a 500 kD

XX conjugate comprising F(ab')₂ antibody fragment that binds to human

XX interleukin-8, covalently attached to one or two polyethylene glycol

XX molecules.

PS Example G; Fig 29; 259pp; English.

XX The invention relates to treating acute lung injury in a mammal,
 CC comprising administering to the mammal an effective amount of a conjugate
 CC of a single antibody fragment covalently attached to 1 or 2 polyethylene
 CC glycol (PEG) molecules, where the antibody fragment is a F(ab')₂
 CC comprising: (a) first chain that is either a light chain or a heavy chain
 CC ; (b) a first opposite chain that is either a heavy chain opposite the
 CC first light chain or a light chain opposite the first heavy chain; (c) a
 CC second chain that is either a light chain or a heavy chain; and (d) a
 CC second opposite chain that is either a heavy chain opposite the second
 CC light chain or a light chain opposite the second heavy chain; where every
 CC PEG molecule is covalently attached to a first cysteine residue in the
 CC first or second chain that would ordinarily form a disulphide bridge with
 CC a second cysteine residue in the first or second opposite chain, where
 CC the disulphide bridge is avoided by substitution of another amino acid
 CC residue for the second cysteine residue in the first or second opposite

CC chain, where the F(ab')₂ comprises an antigen binding site that binds to
 CC human interleukin-8 (IL-8), and where the apparent size of the conjugate
 CC is at least about 500 kD. The antigen binding sites may be derived from
 CC murine monoclonal antibodies 5.12.14 or 6G4.2.5. The method is useful for
 CC treating lung injury, including adult respiratory distress syndrome
 CC (ARDS) in a mammal and inflammatory diseases (such as asthma,
 CC inflammatory bowel disease, psoriasis and sclerosis), ischaemic
 CC reperfusion disorder, stroke, multiple sclerosis, meningitis,
 CC osteoarthritis, septic shock, autoimmune disease (e.g. rheumatoid
 CC arthritis), alcoholic hepatitis, cystic fibrosis and many other diseases
 CC and disorders listed in the specification. The present sequence
 CC represents a human antibody sequence included for comparison with the
 CC mouse humanised monoclonal antibody sequences

PT Treating inflammatory disorder in a mammal, involves administering a

XX conjugate of polyethylene glycol and a single antibody fragment

XX comprising antigen binding site that binds to human interleukin-8, to

XX mammal.

PS Example 3G; Fig 29; 259pp; English.

CC The invention relates to treating an inflammatory disorder in a mammal,
CC comprising administering to the mammal, an effective amount of a
CC conjugate of a single antibody fragment (e.g. the heavy or light chains
CC of the humanised mouse monoclonal antibodies 5.112.14 and 664.2.5, which
CC also have their intramolecular disulphide bridges ablated by substitution
CC mutations) covalently attached to one or two polyethylene glycol (PEG)
CC molecules. The antibodies comprise an antigen binding site that binds to
CC human interleukin-8 (IL-8), and the apparent size of the conjugate is at
CC least 500 kDa. The method is useful for treating an inflammatory disorder
CC e.g. ischaemic reperfusion disorder such as surgical tissue reperfusion
CC injury, myocardial ischaemia or myocardial infarction, or hypovolemic
CC shock, in a mammal e.g. human. The method is useful for treating
CC inflammatory disorders including psoriasis, atopic dermatitis, systemic
CC scleroderma and sclerosis, responses associated with inflammatory bowel
CC disease, ischaemic reperfusion disorders, myocardial ischaemic
CC conditions, cerebral oedema secondary to stroke, cranial trauma,
CC asphyxia, adult respiratory distress syndrome, acute lung injury,
CC Behcet's disease, dermatomyositis, polymyositis, multiple sclerosis,
CC dermatitis, meningitis, encephalitis, uveitis, osteoarthritis, lupus
CC nephritis, autoimmune diseases such as rheumatoid arthritis, Sjogren's
CC syndrome, vasculitis, central nervous system inflammatory disorder,
CC multiple organ injury syndrome secondary to septicemia or trauma,
CC alcoholic hepatitis, bacterial pneumonia, antigen-antibody complex
CC mediated diseases including glomerulonephritis, sepsis, sarcoidosis,
CC immunopathologic responses to tissue/organ transplantation, inflammations
CC of the lung, inflammatory bowel disease such as ulcerative colitis and
CC asthma. The present sequence represents the light or heavy chain of human
CC IgG, used to design the humanising mutations in the two mouse antibodies

XX New human immunoglobulin M antibody for treating or preventing a
 PT demyelinating disease of the central nervous system in a human or
 PT domestic animal, such as multiple sclerosis.
 XX Example 19; Fig 68; 159pp; English.
 XX

CC The invention relates to an antibody (I) produced by injecting an
 CC immunocompetent host with an antibody peptide, and harvesting the
 CC antibody, where the peptide comprises a human anti-IgM antibody fragment
 CC given in the specification, or active fragments. Also included are
 CC stimulating remyelination of central nervous system (CNS) axons in a
 CC mammal (comprising administering a monoclonal antibody, or mixtures,
 CC monomers, active fragments, or recombinant antibodies derived from it,
 CC characterised by their ability to bind structures and cells within the
 CC CNS, including oligodendrocytes), stimulating the proliferation of glial
 CC cells in CNS axons in a mammal (comprising administering a monoclonal
 CC antibody, or mixtures, monomers, active fragments, or recombinant
 CC antibodies derived from it, characterised by their ability to bind
 CC structures and cells within the CNS), treating or preventing a
 CC demyelinating disease of the CNS in a mammal (comprising administering a
 CC monoclonal antibody, or mixtures, monomers, active fragments, or
 CC recombinant antibodies derived from it, characterised by their ability to
 CC bind structures and cells within the CNS, and to stimulate remyelination
 CC of axons of the CNS), stimulating, in vitro, the proliferation of glial
 CC cells from mixed cell culture, stimulating remyelination of CNS axons in
 CC a mammal, a DNA sequence (or degenerate variant of it) which encodes an
 CC antibody/or a peptide analogue, hapten, or active fragment of it, where
 CC the DNA sequence consists of a sequence encoding an anti Igm antibody), a
 CC probe capable of screening for the antibody, an assay for screening drugs
 CC and other agents for the ability to modulate the production or mimic the
 CC activities of mAb SH1G22, SH1G46, or combinations of them, a
 CC recombinant virus transformed with recombinant antibody nucleic acids or
 CC vector, imaging a portion of the CNS using the antibody and diagnosing or
 CC monitoring demyelination and/or remyelination of the CNS comprising using
 CC CNS image. The antibody is used to stimulate remyelination of CNS axons,
 CC and to stimulate the proliferation of glial cells in CNS axons,
 CC optionally in vitro. The antibody is used to treat or prevent a
 CC demyelinating disease of the CNS in a human or domestic animal, such as
 CC multiple sclerosis, or a disease, other injury or dysfunction of the CNS,
 CC preferably the mammal is a mouse infected with Strain DA of Theiler's
 CC murine encephalomyelitis virus. The antibody is used to treat a spinal
 CC cord injury and used to screen drugs and other agents for the ability to
 CC modulate the production or mimic the activities of the antibody. The
 CC antibody can be used to image a portion of the CNS which can be used to
 CC diagnose or monitor demyelination and/or remyelination of the CNS. The
 CC present sequence is a variable region of a mouse anti-IgM antibody (or
 CC fragment).

XX Phage display system for identification of binding site domains retaining
XX capacity to bind an epitope.
XX Claim 27; Fig 6.3; 152pp; English.
XX The invention relates to a method of identifying binding site domains
XX (BSD) that retain the capacity of binding to a predetermined epitope when
XX positioned C-terminal of at least one further domain in a recombinant bi-
XX or multivalent polypeptide. The method comprises (a) testing a panel of
XX BSD displayed on the surface of a biological display system as part of a
XX fusion protein for binding to a predetermined epitope, where the fusion
XX protein comprises an additional domain positioned N-terminal of the BSD
XX and an amino acid sequence that mediates anchoring of the fusion protein
XX to the surface of the display system; and (b) identifying a BSD that
XX binds to the predetermined epitope. The method is useful to identify bi-
XX or multivalent polypeptides that comprise antibody binding sites capable
XX of efficiently binding to the corresponding antigen. The polypeptides or
XX antibodies identified by the method are useful therapeutically and
XX diagnostically, for e.g. cancer and autoimmune diseases. scFv-antibody
XX fragments that bind independently of their position within bifunctional
XX single-chain fusion proteins can be isolated from combinatorial antibody
XX libraries using the new in vitro method. Sequences AAY17957-965 represent
XX mouse scFv fragments

XX New cytotoxicity active CD3 specific binding construct comprises a first
PT domain specifically binding to human CD3 and an Ig-derived second binding
PT domain, useful for treating, preventing, or ameliorating, e.g.
PT proliferative disease.

XX Claim 20; SEQ ID NO 31; 639pp; English.

PS The invention relates to a cytotoxicity active CD3 specific binding
CC construct comprising a first domain specifically binding to human CD3 and
CC an Ig-derived second binding domain. The CD3 specific binding construct
CC above or the construct produced by the process, nucleic acid molecule,

CC vector, or host is useful for the preparation of a pharmaceutical
CC composition for the prevention, treatment, or amelioration of a
CC proliferative disease, a tumor, an inflammatory disease, an immunological
CC disorder, an autoimmune disease, an infectious disease, viral disease,
CC allergic reactions, parasitic reactions, graft-versus-host disease, or
CC host-versus-graft diseases. The cytotoxicity active CD3 specific binding
CC construct is useful for treating, preventing, or ameliorating
CC proliferative disease, a tumor, an inflammatory disease, an immunological
CC disorder, an autoimmune disease, an infectious disease, viral disease,
CC allergic reactions, parasitic reactions, graft-versus-host disease, or
CC host-versus-graft diseases. The present sequence represents the amino
CC acid sequence of an anti-Epcam binder.

 XX
 PS Example; SEQ ID NO 64; 54pp; English.
 XX
 CC The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful
 CC for treating and preventing infectious diseases such as human
 CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 CC disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 CC disease and ulcerative colitis, adult respiratory distress syndrome,
 CC allergic diseases such as eczema and asthma, autoimmune diseases such as
 CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 CC mellitus, Reynaud's syndrome, immunological diseases such as
 CC tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary
 CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukaemia and hairy cell leukemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is humanised murine anti-human CD1a monoclonal antibody
 CC (MHM24) CDR-L3 mutant peptide. This sequence is used in the
 CC exemplification of the invention.

 PT New polypeptide comprising a complementarity determining region (CDR)
 PT consisting of CDR1a, CDR2a, CDR3a, CDR1b, CDR2b or CDR3b and capable of
 PT binding hepatocyte growth factor, useful in preparing a composition for
 PT treating cancer.
 XX
 PS Claim 5; SEQ ID NO 88; 301pp; English.

XX
 CC The invention relates to a novel isolated polypeptide comprising at least
 CC one complementarity-determining region (CDR) consisting of CDR1a, CDR2a
 CC or CDR3a, or CDR1b, CDR2b or CDR3b. The polypeptide, in association with
 CC an antibody heavy or light chain, is capable of binding hepatocyte growth
 CC factor (HGF). HGF, also known as scatter factor (SF), has been identified
 CC as a potent mitogen for hepatocytes and also as a secretory protein of
 CC fibroblasts and smooth muscles that acts to induce motility of epithelial
 CC cells. The polypeptide demonstrates cytosstatic activity and may be useful
 CC in preparing a composition for treating cancer or a solid tumor. The
 CC current sequence is that of the human anti-HGF antibody light chain
 CC variable region CDR3 peptide -SEQ 88 of the invention.

XX PT Novel humanized, chimeric monoclonal antibody that specifically binds to
XX PT insulin-like growth factor I (IGF-1) receptor useful for inhibiting
XX PT binding of IGF-I or IGF-II to receptor and for treating cancer in humans.
XX PS Claim 9; Page 129; 172pp; English.

XX CC This invention relates to a novel humanised, chimeric or human monoclonal
XX CC antibody or its antigen binding portion that specifically binds to
XX CC insulin-like growth factor I receptor (IGF-IR). The antibodies of the
XX CC invention can act as an inhibitor of binding of IGF-I or IGF-II with IGF-
XX CC IR and can inhibit in vivo tumour growth and IGF-IR tyrosine
XX CC phosphorylation. The antibodies of the invention are useful for
XX CC diagnosing the presence or location of an IGF-IR-expressing tumour in a
XX CC subject. The antibody or its antigen-binding portion is also useful for
XX CC treating cancer in a human. The method for this further involves an anti
XX CC neoplastic, anti-tumour, anti-angiogenic or chemotherapeutic agent. The
XX CC antibodies may also be useful for increasing IGF-IR activity and thus

CC restoring IGF-IR activity in a condition characterised by low IGF-IR
CC levels e.g. neuropathy, or osteoporosis. An antibody of the invention is
CC also useful for inducing apoptosis of specific cells in a patient, and to
CC treat non-cancerous sites or disease, e.g. acromegaly, gigantism,
CC psoriasis and atherosclerosis. Fully human anti-IGF-IR antibodies
CC minimise the immunogenic and allergic responses intrinsic to mouse or
CC mouse-derived monoclonal antibodies and thus increase the efficacy
CC and safety of the administered antibodies. The present sequence
CC represents an anti-insulin-like growth factor I receptor antibody of the
CC invention

 metastatic tumor.

PS Claim 3; SEQ ID NO 14; 87bp; English.

XX The invention relates to a novel monoclonal antibody used for inhibiting
 CC tumour growth in an animal. The tumour inhibition process comprises
 CC selecting an animal in need of treatment for a tumour, providing a
 CC monoclonal antibody comprising a heavy chain amino acid, where the
 CC antibody consists of any one of 10 fully defined sequences of 117-123
 CC amino acids given in the specification, and where the monoclonal antibody
 CC binds MUC18, and contacting the tumour with the antibody resulting in
 CC inhibited proliferation of the cells. The monoclonal antibody has
 CC cytostatic and can be used in the production of a vaccine. The monoclonal
 CC antibodies against the MUC18 antigen are useful for diagnosing and
 CC treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or
 CC tumour metastasis), inhibiting cell invasion associated with melanoma, or
 CC increasing survival of an animal having a metastatic tumour. This
 CC sequence represents an anti-MUC18 antibody light chain, variable region,
 CC protein of the invention.

PT Inhibiting cell proliferation associated with expression of MUC18 tumor
 antigen, involves incubating and inhibiting cell by administering anti-
 MUC18 monoclonal antibody.

PS Claim 3; SEQ ID NO 14; 83bp; English.

XX The invention comprises a method for inhibiting cell proliferation
 CC associated with expression of MUC18 tumour antigen. The method involves
 CC administering anti-MUC18 monoclonal antibody. The method of the invention
 CC is useful for inhibiting cell (e.g. melanoma or tumour cell)
 CC proliferation associated with the expression of MUC18 tumour antigen, the
 CC method is preferably useful for inhibiting tumour metastasis. The method
 CC is useful for inhibiting cell proliferation in patients with tumours,
 CC carcinomas, cancer and other malignancies. The present amino acid
 CC sequence represents a light chain from an MUC18 tumour antigen-specific
 CC monoclonal antibody.

RT "Chitin synthase-encoding gene(s) of the Zygomycete fungus Phycomyces blakesleeanus.";
RL Gene 134:129-134 (1993).
CC -!- FUNCTION: Plays a major role in cell wall biogenesis.
CC -!- CATALYTIC ACTIVITY: UDP-N-acetyl-D-glucosamine + (1,4-(N-acetyl-beta-D-glucosaminyl)) (n) = UDP + (1,4-(N-acetyl-beta-D-glucosaminyl)) (n+1).
CC -!- SUBCELLULAR LOCATION: Integral membrane protein. Plasma membrane.
CC -!- SIMILARITY: Belongs to the chitin synthase family.

; Patent No. 6875433
; GENERAL INFORMATION:
; APPLICANT: HART, MARY KATE
; APPLICANT: WILSON, JULIE
; TITLE OF INVENTION: MONOCLONAL ANTIBODIES AND COMPLEMENTARITY-DETERMINING
; TITLE OF INVENTION: REGIONS BINDING TO EBOLA GLYCOPROTEIN
; FILE REFERENCE: ARMY 166
; CURRENT APPLICATION NUMBER: US/10/226,795
; CURRENT FILING DATE: 2002-11-18
; NUMBER OF SEQ ID NOS: 40
; SOFTWARE: Patentln Ver. 2.1
; SEQ ID NO 20
; LENGTH: 9
; TYPE: PRT
; ORGANISM: Artificial Sequence
; FEATURE:
; OTHER INFORMATION: Description of Artificial Sequence: Synthetic light
; OTHER INFORMATION: chain of Mab EGP13C6-1-1 amino acid sequence
US-10-226-795-20

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

US-11-054-515-1922
; Sequence 1922, Application US/11054515
; Publication No. US2005025532A1
; GENERAL INFORMATION:
; APPLICANT: Ruben et al.
; TITLE OF INVENTION: Antibodies that Immunospecifically Bind Blys
; FILE REFERENCE: PF523P3
; CURRENT APPLICATION NUMBER: US/11/054,515
; CURRENT FILING DATE: 2005-02-10
; PRIOR APPLICATION NUMBER: 60/543,296
; PRIOR FILING DATE: 2004-02-11
; PRIOR APPLICATION NUMBER: 60/580,347
; PRIOR FILING DATE: 2004-06-18
; PRIOR APPLICATION NUMBER: 10/293,418
; PRIOR FILING DATE: 2002-11-14
; PRIOR APPLICATION NUMBER: 60/331,469
; PRIOR FILING DATE: 2001-11-16
; PRIOR APPLICATION NUMBER: 60/340,817
; PRIOR FILING DATE: 2001-12-19
; PRIOR APPLICATION NUMBER: 09/880,748
; PRIOR FILING DATE: 2001-06-15
; PRIOR APPLICATION NUMBER: 60/293,499
; PRIOR FILING DATE: 2001-05-25
; PRIOR APPLICATION NUMBER: 60/277,379
; PRIOR FILING DATE: 2001-03-21
; PRIOR APPLICATION NUMBER: 60/276,248
; PRIOR FILING DATE: 2001-03-16
; PRIOR APPLICATION NUMBER: 60/240,816
; PRIOR FILING DATE: 2000-10-17
; Remaining Prior Application data removed - See File Wrapper or PALM.
